Get ready to discover mathematics all around you this winter!

Just like reading, regular practice with problem solving, computation, and math facts will maintain and strengthen the mathematic gains you have made over the school year.

Enjoy these activities to explore problem solving at home. The goal is for you to have fun thinking and working collaboratively as a family to communicate mathematical ideas.

While you are working ask how the solution was found and why a particular strategy helped you solve the problem.

Literature and websites are also recommended to explore mathematics in new ways.

Keeping a Math journal is a great way for children to log their ideas about Math as well as strategies for arriving at solutions. Here is an example of a journal entry:

January 6,

This winter my family and I plan to go on a ski vacation. I have been asked to calculate the cost of the ski portion of the trip. We will be staying for 4 days and 5 nights. I must find the cost for ski rentals and lift tickets. I began to do my research on the internet and found the following web sites helpful.

<http://www.travelchannel.com/interests/family/articles/family-ski-trip-3-ways-to-save>

http://theleif.org/trips/planning_ski_trip.php

<http://www.marketwatch.com/story/save-on-ski-trips-2013-12-16>

Information for journal entry taken from internet websites.

I found Blue River Sports in Breckenridge, Colorado to be pretty good: 18\$/day, 5th day free, 10% off when reserving more than 10 days ahead. They can store your skis for free, which might make sense if it's on the way to the lift. Black Tie in Telluride was double the price at 36\$/day.

Ticket prices depend on how many days you want to ski. 3 of 5 days was 255\$, 4 of 6 was 316\$, and 5 of 8 was 365\$ (73\$/day). ("3 of 5" means you can ski 3 days within a 5-day period.) Tickets are good at any Vail resort: Breckenridge, Vail, Beaver Creek, etc. A Telluride 5-day ticket was 415\$, or 83\$/day.

I think drawing a graph of the expense will help me to see the differences in costs.

Games To Play (You will need a deck of cards)

1. Compare

Remove the face cards from a deck of cards. Remember an Ace is the same as 1. Pass out all of the cards in the deck among all of the players. Each player flips over one card at the same time. The player with the higher number keeps both cards. If the two cards are the same, turn over another card. The player with the higher number keeps all four.

2. Double Compare

Same as above, but turn over two cards each time and find the sum. The one with the larger sum takes the cards.

3. Close to 10

Remove the face cards from a deck of cards. Deal 3 cards to each player. Which two cards brings you closest to 10? Which player is closest to 10? Example: You turn over the cards 5, 4, 3 and your opponent turns over an Ace, 8, and 3. You can make 9 (5 and 4) and your opponent can make 9 (Ace and 8) or 11 (8 and 3). It's a tie since you are both 1 away from 10!

Other games to play:

Checkers, Memory, Chutes and Ladders, jigsaw puzzles, Parcheesi, Fish, Crazy Eights, Candy Land, Blink, Connect Four, Legos, K'Nex.

Check out the PDF: [Making Math More Fun Board Games](#) that contains a variety of board games for different grade levels.
